

Baton "TE" & "TF" Lever Sets Hand Change Manual

Baton TE and TF Lever Sets are handed. Please specify the exact handing required for your applications when ordering, so that you will received the correct handing(s) for your application.

Handing of doors

The hand of the door is always determined from outside. Face the door and swing the door into left side of the room is left-hand (LH); swing out to the left is Left-hand reverse (LHR). Face the door and swing the door into right side of the room is Right-hand (RH); swing out to the right side of the room is Right-hand reverse (RHR).

The picture left (below) showed as LH / Left Hand Lever set, and the picture right showed as RH / Right Hand.

Order received without having the handing specified will be shipped with Right Hand set. If the handing of the Lever set received, or accidentally wrong handing was ordered, you may return to Baton for handing change, or follow the below instruction to convert the handing. An external "Retaining Ring Pliers" is the only tool you need. If you do not have a retaining Ring Pliers, one flat tip screw driver plus one pointed tool can also do the work.

Converting from Right Hand (RH) to Left Hand (LH)
